(54) Title: SYSTEM AND METHOD FOR TRANSMITTING LOCALLY HELD INFORMATION IN A LOOSELY COUPLED MULTIPROCESSOR SYSTEM		
(57) Abstract <p>A multiprocessor system comprising an administrative processor and a plurality of worker processors coupled in a network have been provided, whereby routines are implemented for the transferral of locally held counter values between worker processors and the administrative processor achieving a substantial reduction of the transmittal of redundant administrative messages on the network and thereby enhancing the overall user capacity of the network.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="401 736 616 1177"> <pre> graph TD 1[Assign probe] --> 2[Request register probe] 2 --> 3[Perform changes in value] 3 --> 4{Delete probe?} 4 -- No --> 3 4 -- Yes --> 5[Request De-register probe] </pre> </div> <div data-bbox="694 736 909 1177"> <pre> graph TD 1[Event] --> 2[Request for measurement] 2 --> 3[Get probe values from registered worker proc.] 3 --> 4{Asked all?} 4 -- No --> 3 4 -- Yes --> 5[Deliver measurement value] </pre> </div> </div>
